Customer Case Study

Professional Services

// Problem

GemPool handle sensitive, confidential data from employers and candidates. They move at the speed of their contacts, working remotely is the norm for the GemPool team. Keeping mobile devices and information secured without impacting end-user experience was the ultimate goal.

// Case Background

GemPool is a leading recruitment company that specializes in finding the right hires with niche technical skills for technological and software companies. They have a growing fleet of devices consisting of both smartphones and tablets, and deal with an extensive volume of confidential information from clients and candidates on a daily basis. Mobile devices are used to access services such as G Suite and it is via this service that all of their data is collected and stored. Recognizing that mobile has become the preferred work model for employees, GemPool needed an easy to deploy, affordable solution that would enable them to protect their devices both inside and outside the corporate network.

// Solution

The security of sensitive customer data collected and accessed via mobile devices was a concern for GemPool. As the devices are used outside of the corporate network and its protections, GemPool recognized the potential risks associated with non-company owned Wi-Fi connections, phishing attacks, and other malicious threats designed to intercept data from company owned devices. Deploying the Corrata Internet Security solution has mitigated the risks posed by phishing and malware attacks by detecting and blocking attacks before they can harm the user and notifying the administrator. Devices are fully protected from insecure Wi-Fi or unapproved cloud services to prevent data leakage, and the security status of the entire mobile fleet is constantly monitored in order to detect possible vulnerabilities. Paired with Corrata, G Suite can be used as usual to collect and store data and communicate with colleagues and clients, however now data is protected from leakage and cyber threats giving total peace of mind.

"*Our team are ultra-mobile and we have to remain ultra-secure. Corrata gives us the confidence to get the job done from any location without taking risks*"

– Michael Lantry, Director
