

Microsoft Defender Advanced Threat Protection

A unified platform for prevention, post-breach detection, investigation, and response.

Microsoft Defender Advanced Threat Protection (ATP) is a unified platform for preventative protection, post-breach detection, automated investigation, and response. Microsoft Defender ATP is a complete security solution powered by the intelligent cloud that protects endpoints from cyber threats, detects advanced attacks and data breaches, automates security incidents, and improves security posture. Security and data privacy are the priorities of the platform.

Microsoft provides the best platform to manage Windows as a service for IT organizations, and to help realize the promise of cloud-based endpoint management

Extends the value of existing management infrastructure by attaching the power of Microsoft 365 cloud for automation and intelligent security insights

Ensures security and compliance at all levels, starting with the device itself, and responds in real-time to the ever- changing threat landscape .

How Corrata integrates with Microsoft Defender Advanced Threat Protection

With the integration of Microsoft Defender ATP and Corrata, InfoSec teams have a "single pane of glass" across desktop and mobile platforms to detect, investigate and defend against any potential threats. Microsoft Defender ATP users can investigate mobile security threats directly from within the Microsoft Defender Security Center. Together the two solutions provide an integrated view of an organization's and user's threat status which improves the speed, productivity and effectiveness of threat management.

CUSTOMER BENEFITS

- Best in class threat protection across mobile and desktop platforms.
- Consolidated real time view of threats and incidents across an organization's entire estate with full drill down capabilities.
- Assessment of the security status of iOS and Android devices presented within Microsoft Defender Security Center.
