

Microsoft Defender for Cloud Apps

Visibility and control across all your cloud apps to identify and combat cyberthreats.

Microsoft Defender for Cloud Apps is a cloud access security broker (CASB) that enhances the security posture of an organization's cloud apps by identifying and combatting cyber threats. It provides rich visibility, control over data travel, and sophisticated analytics across all your cloud services. Microsoft Defender for Cloud Apps natively integrates with leading Microsoft solutions. It is designed with security professionals in mind—providing simple deployment, centralized management, and innovative automation capabilities.

How Corrata integrates with Microsoft Defender for Cloud Apps to extend discovery and control of Shadow IT to iOS and Android

Today robust mechanisms for discovering cloud app usage and blocking unapproved apps are critical. New SaaS apps need to be quickly identified and risk assessed. This is a particular challenge for remote and mobile working. By integrating with Corrata, Microsoft Defender for Cloud Apps customers can now directly control and monitor cloud app usage on iOS and Android endpoints beyond the network perimeter.

Customer Benefits

- Makes it easy for customers of Microsoft Defender for Cloud Apps to manage Shadow IT across iOS and Android devices regardless of whether their employees are in the office, at home or on the road.
- Provides an integrated view of an organization's cloud app usage and one-click enforcement of app usage policies across iOS, Android and Windows devices. This significantly improves IT teams' ability to secure cloud app usage across their organization.
- Allows you to enable endpoint-based cloud app discovery and control on and beyond the corporate network for smartphones and tablets.
