

Microsoft Defender for Endpoint

A unified endpoint security platform for prevention, post-breach detection, investigation, and response.

Microsoft Defender for Endpoint is a complete security solution powered by the intelligent cloud that protects endpoints from cyber threats, detects advanced attacks and data breaches, automates security incidents, and improves security posture. It offers a rich set of APIs to build integrated solutions. Security and data privacy are the priorities of the platform.

How Corrata integrates with Microsoft Defender for Endpoint

With the integration of Microsoft Defender for Endpoint and Corrata, InfoSec teams have a "single pane of glass" across desktop and mobile platforms to detect, investigate and defend against any potential threats. Microsoft Defender for Endpoint users can investigate mobile security threats directly from within the Microsoft Defender Security Center. Together, the two solutions provide an integrated view of an organization's and user's threat status which improves the speed, productivity and effectiveness of threat management.

Customer Benefits

- Best in class threat protection across mobile and desktop platforms.
- Consolidated real-time view of threats and incidents across an organization's entire estate with full drill down capabilities.
- Assessment of the security status of iOS and Android devices presented within Microsoft Defender Security Center.
