

Your organization's best defense against mobile threats

In 2021, the average cost of a data breach was \$1.07 million higher at companies supporting a remote workforce.¹ With increased adoption of remote and hybrid work models, sensitive company data is increasingly accessed and stored on mobile devices. This opens the door to advanced malware, phishing attacks, and many other threats. Corrata partners with Microsoft to give organizations an integrated view of security threats across systems. Build up a stronger immune system for every device that connects to company data and proactively protect your distributed teams without complex security systems or high IT expenditure.

Enhance Endpoint security for smartphones and tablets with Corrata and Microsoft

Advanced threat defense

Instantly identify and block phishing attacks. Detect and disable advanced malware, spyware, and zero-day attacks. Deploy and manage the Corrata Endpoint agent within your Microsoft Intune environment.

Customizable solution

Establish and implement mobile data usage control policies with Corrata and Microsoft Cloud App Security. Gain an integrated view of cloud app usage and one-click enforcement of app usage policies across iOS, Android, and Windows devices.

Increased control and visibility

Leverage the Microsoft Defender for Endpoint and Corrata integration to protect against threats while maintaining a unified view of your organization's threat status, improving speed, productivity, and effectiveness of threat management.

Guaranteed employee privacy

Assess the vulnerabilities of each device without accessing personal data like passwords, content of text messages, or emails. Preserve your employees' privacy and maintain regular workflow on devices – all while remaining GDPR compliant.

Protect all your mobile devices from the full spectrum of security threats

Corrata scans 4,000 sites and apps per device daily, detecting an average of 10 threats every day.²

- Automatically block threats without the need for security analyst involvement.
- Gain unprecedented visibility and control over mobile devices without compromising user privacy.
- Stop phishing attacks from all channels of communication, including email, SMS, and messaging apps.
- Protect sensitive data and impede interception of sensitive communication.
- Detect threats missed by traditional mobile security solutions with a 100% internet traffic check.²
- Devise organizational policies down to the device level to protect business data.
